SEE YOUR LEARNERS FROM A DIFFERENT PERSPECTIVE

Data-driven cognition technology
for the future thinking organisation

Cognassist
Thinking your way

Are you missing something?

If you're not assessing neurodiversity and cognitive learning needs, then you're missing out on the best learner outcomes, higher levels of learner retention and increased funding. With Cognassist, you get a unique brain mapping tool with the resources and reports you need to make assessment and support simple.

If you wait for learners with cognitive learning needs to self-identify, or for their learning needs to become apparent, you're paving the way for demotivation, poor results and early leavers. Yet, with a 6-8 week waiting list to see an assessor and a high price tag, it's not surprising that so many learners with cognitive learning needs are unrecognised. Learning needs are overlooked, and neither the learner nor their learning provider is able to achieve the results they're capable of.

Assess cognitive learning needs, give learners a personalised support programme, and the impact is huge, changing lives and workplaces for the better. Barriers to learning are removed, as equality, inclusion and the creation of a level playing field become a natural part of the learning journey.

"Before Cognassist, support was good but it wasn't consistent or linked to individual needs. Now, learners are supported on a consistent basis and we're seeing the success of learners who have gone through the programme. Overall, our success rates have improved and there is higher retention and progression. Using Cognassist, we can quickly see engagement reports and progress and provide a whole package of support for the learner. "

Asa Gordon, Assistant Principal, Bradford College

Cognassist gives you a new perspective

Cognassist's advanced cognitive assessment was developed by experts in neuroscience and educational psychology. It changes the way you look at your learners in under 30 minutes. Our unique online assessment:

- Gives a full assessment of learner needs enabling you to accurately identify starting points and comply with Ofsted requirements
- Creates a tailor-made support programme, with tools and strategies for success
- Produces a comprehensive report on learner needs so you can access additional funding streams and gain a different perspective on your learners
- Reports on progress as the learner progresses through the learning programme

It's all built on cutting-edge neuroscience meeting smart data technology. Use it and everything changes: learners feel supported and have the tools to succeed, while you receive the insight you need to help make it happen.

Cognassist is your digital portal to a learning revolution. It's inclusive learning for the future thinking organisation.

What are cognitive learning needs?

Neurodiversity is the term given to the different way individual brains gather and interpret information. A sizeable minority of the population are neurodivergent: their brain function differs from that which society expects.

Cognassist was created to enable neurodivergent learners, who have cognitive learning needs, have equal opportunities to learn and succeed. It was developed with leading neuropsychologists Dr John Welch and Dr Clive Skilbeck, plus our neurodiversity expert Dr Louise Karwowski.

When cognitive learning needs are rigorously assessed, understood and supported, learning providers see greater engagement, higher levels of achievement and a more supported learner. To make the process fast, simple and cost-effective, Cognassist has combined neuroscience expertise with smart technology to create a robust and systematic method that ensures no one is excluded and every learner reaches their full potential.

"What Cognassist has done is identify a broader range of learning needs which has enabled us to support the learners in a much more rounded way."

Rob Johnson, Operations Director, Central YMCA

How does Cognassist help?

Our cognitive testing is a breakthrough for people with cognitive learning needs and their learning providers.

A 30 minute online test assesses the 8 cognitive domains that affect thinking and learning, showing where learner support is needed. Advanced technology analyses complex information, creating an individual learner report, which is used to understand learner starting points, enabling a support programme to be put in place.

Cognassist then goes on to create a personalised support programme for the learner, based on the 30 minute assessment. The programme draws on over 500 media-rich learning strategies and resources to support learners at levels 1-6.

We then provide performance dashboards coupled with insight into reasonable adjustments required and activities likely to need support. You can leverage the data to monitor trends, track staff and learner performance, and act quickly to improve retention and success rates.

It's online and accessible, user-friendly and massively effective.

Cognassist enables you to identify, support and fund all learners with cognitive learning needs.
